- The metric prefixes (micro, pico, nano, ...) are given for ready reference on the inside front cover of the textbook (see also Table 1-2).
 - (a) Since $1 \text{ km} = 1 \times 10^3 \text{ m}$ and $1 \text{ m} = 1 \times 10^6 \mu \text{m}$,

 $1 \text{ km} = 10^3 \text{ m} = (10^3 \text{ m})(10^6 \, \mu\text{m/m}) = 10^9 \, \mu\text{m}$. The given measurement is 1.0 km (two significant figures), which implies our result should be

written as $1.0 \times 10^9 \ \mu \text{m}$.

written as
$$1.0 \times 10^9 \ \mu \text{m}$$
.
(b) We calculate the number of microns in 1 centimeter. Since $1 \text{ cm} = 10^{-2} \text{ m}$,

 $1 \text{ cm} = 10^{-2} \text{ m} = (10^{-2} \text{ m})(10^6 \, \mu\text{m/m}) = 10^4 \, \mu\text{m}$.

We conclude that the fraction of one centimeter equal to $1.0 \,\mu\mathrm{m}$ is 1.0×10^{-4} .

(c) Since 1 yd = (3 ft)(0.3048 m/ft) = 0.9144 m,

 $1.0 \text{ vd} = (0.91 \text{ m})(10^6 \, \mu\text{m/m}) = 9.1 \times 10^5 \, \mu\text{m}$.
